DETAILED ACTION

Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: a means for actuating and fastening and a fastening

Art Unit: 3781

actuator are not present in the specification. They must be described in the specification.

Claim Objections

2. Claims 18-20 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 18-20 are the same as claims 12-14.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 15-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claim 15 recites the limitation "tank part" in lines 5 and 6. There is insufficient antecedent basis for this limitation in the claim.

6. Claim 16 recites the limitation "connection means" in line 5. There is insufficient antecedent basis for this limitation in the claim.

7. Claim 17 recites the limitation "means for actuating and fastening" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 1-6, 8-12, 14-18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Yokochi et al. (U.S. Patent No. 6,123,216).

10. Regarding claims 1-6 and 8, Yokochi discloses a tank for oils or liquids comprising a tank part (1) having a tank volume, a fastening means (81) made up of a screw connections that pass through the tank volume in a leak proof manner, ducts (d, Fig. 2 below labeled by examiner) extending within the tank part on an outer circumference of the tank part that screws extend through, a tank cover (col. 4, lines 16-18), a filler neck (23) and two connection pipes (73 and 76). The ducts are shortened in relation to the depth of the tank and recesses are provided on the circumference of the tank, this creating a space between the ducts and the tank cover (Fig. 4). The screws are premounted on the tank prior to use and the tank further providing positioning aides (p) located on an outer surface of the tank part in an area of first and second ducts.

11. Regarding claims 9-12, 14, 17, 18 and 20, Yokochi discloses all the claimed limitations as shown above and a tank base (40) and tank cover (20).

12. Regarding claims 15 and 16, Yokochi discloses all the claimed limitations as shown above and a means for actuating on an actuating side opposite the side of the fastener used for fastening.

Claim Rejections - 35 USC § 103

13. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

14. Claims 7, 13 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yokocho in view of Alleaume (U.S. Patent No. 3,511,003).

15. Yokocho discloses all the claimed limitations as shown above but fails to teach that the screws are sealed by a weld seam.

16. Alleaume teaches that it is known in the art to manufacture a container for fluids wherein the screws are sealed by a weld seam (col. 9, lines 40-42).

17. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have manufactured the screws of Yokocho with weld seams, as taught by Alleaume, in order to better seal the container and to prevent rotation, thus efficiently avoiding any undesired unscrewing due to shaking and vibration.
